Charles Darwin: Legal, Commercial and Environmental Model

- 1. Environmental commerce:** At Pysdens, together with our associate unit research TheHouseofBranchofGold, we have drafted a **commercial, legal and environmental model** in which we have utilised a Darwinist approach when considering economics in relation to law rather than a conventional approach according to the theories of Adam Smith. This is to say that we have used an economic concept of the law based on what nature allows us to do or not as it would appear that the universe operates according to the same economic concept: one element interacts with another for a purpose and so on.
- 2. System of carbon credits:** we propose that is no longer moral, ethical or legal to allow countries to buy carbon credits from other countries in order to allow them to pollute planet earth further. When considering ecology and the environment it is wrong to consider these in terms of what is happening in individual countries. For example, the Amazon rain forest, often referred to as the lungs of the world, is not a Brazilian problem in terms of deforestation, but a problem for us all. There is only one Planet Earth and it has a unique system where elements operate singularly and interact with each other at the same time often having a knock on effect around the globe.
- 3. Change of attitude:** We are not suggesting that the economy should change in a short period of time but a change must take place. Climate change has long been a contentious issue with those suggesting it is down to natural causes and others

suggesting it is a man-made phenomenon and others suggesting it is a combination of both. Whatever the cause action is needed.

- 4. Concept:** we have prepared our model in order to illustrate how it would operate in a world economy where scientific data relevant to likely effects on the environment would be the starting point for a decision on whether commerce or other human activity should be regulated or permitted without regulation or prohibited. Such a new economic world system would raise important questions that individuals must ask themselves as well as at a community and country and global level as important decisions need to be taken and soon if we are to bring about significant change.

We at Pysdens Solicitors make every effort to keep our expenses to a minimum in order to pass our savings to our clients. Our fees are very competitive which, in times of economic difficulties, is important to consider. Our policy is to resolve disputes early rather than to litigate.

Disclaimer: This is not legal advice. We cannot advise any party to act based on this report without first consulting a specialised solicitor. The opinions in this report are those of the writers.

Note: In producing this press release by Pysdens Solicitors, the models published in books entitled "GUIDELINES TO CONSIDER IN RESPECT OF COMMERCIAL DEALINGS" (CI); "GLOBAL ENVIRONMENTAL LEGAL & COMMERCIAL STRATEGY" (CIII) and the draft "THE DARWIN PROJECT: UNIVERSAL CODE" (CIV) by S. Perez-Goldzveig and K.Pysden forming part of the research and development programme "COMMERCIAL GUIDE INITIATIVE" by S. Perez-Goldzveig and K.Pysden being part of "TheHouseofBranchofGold" were used with the authorisation of the authors.
